

Software Engineering AI Co-op Student

Python | SQL | Data Analysis

- Current Software Engineering Technology – Artificial Intelligence student at Centennial College
- Programming experience with **Python**, **HTML** and **CSS**
- Knowledge of **SQL** and relational databases, including queries, joins, aggregate functions and database design
- Experience developing object-oriented programs using Python
- Familiar with Git, GitHub, Visual Studio, VS Code and Oracle SQL Developer
- Developing knowledge of **artificial intelligence concepts** and **AI system design** through academic coursework
- Strong communication, problem-solving and organizational skills developed through professional recruiting experience
- Previous professional experience in recruiting, customer service, interviewing and data entry

Education

Software Engineering Technology – Artificial Intelligence (Online) (Advanced Diploma)

Centennial College, Toronto, Ontario
December

January 2026 - Present
Expected graduation

Relevant Coursework: Python Programming • Database Concepts • AI Systems Design • Introduction to AI • Web Application Development • Linear Algebra & Statistics • Software Requirements Engineering

Project Work

Soccer Team Manager

Personal Project | Python, Oracle SQL | 2026

- Developed a **Python-based soccer team management program** connected to an Oracle SQL database to manage Premier League teams, players, and statistics
- Implemented SQL functionality to **retrieve player data, add and remove players, and update individual player statistics**
- Created features to calculate and display **top scorers, top assisters, team totals, and individual player statistics**

F1 Race Strategy Simulator

Personal Project | Python, Oracle SQL | 2026 – Present

- Currently developing a **Python-based Formula 1 race strategy simulator** to model and compare different race strategies
- Simulates race performance using factors such as **lap times, tire compounds, tire degradation and pit-stop timing**
- Designed for continued development with **SQL-based race data analysis** and predictive strategy modelling

Work Experience

Recruiter

Aerotek | Kitchener, Ontario

April 2022 – May 2024

- Worked toward weekly recruiting targets of 25 detailed candidate conversations, 10 interviews, 6 candidate submissions, and 2 successful job starts
- Recruited and screened candidates for positions in the light industrial and skilled trades industries through cold calling, Indeed, referrals, internal databases, and in-person networking
- Conducted detailed candidate conversations and interviews to understand employment history, skills, experience, and career goals
- Managed candidate profiles and maintained accurate information regarding employment status, qualifications, availability, and job preferences
- Supported active contractors by responding to workplace concerns, time-off requests, performance feedback, and general employment questions
- Identified potential business leads and scheduled meetings for account managers
